Cyberside Chats: Summer Edition

Weekly Recap

Special points of interest:

- The Future of Ethereum
- Google Hit With Antitrust Complaint
- Inside FLEX-SCALE: The EU's Vision For A Greener, Faster 6G Internet
- Falconi's Progress: Interns Creativity Sparking Potential New Business Venture

This week, interns entered Week 2 of the Incident Response Pathway, focusing on identifying suspicious behaviors and learning the formal incident reporting process. A key deliverable was a Table-Top Exercise led by the Incident Response Team, designed to evaluate how well Falconi's IR plan holds up under a simulated crisis. Interns were also assigned Hack The Box training modules that introduced essential Network Analysis tools, such as Wireshark and Elastic. Using these tools, they created an Incident Report based on a simulated packet capture, applying real-world skills in a controlled environment.

This week's Professional Development session was led by Mike

Battistella, President of Solutions3, and focused on Strategic Thinking and Planning. Interns explored frameworks and tools used in long-term decision-making and set their own personal and professional SMART goals to guide their future growth.

This week's Vendor of the Week was Horizon3.ai, presented by Mark Marino. Interns learned how Horizon3 supports proactive threat detection and how Solutions3 integrates it into its cybersecurity approach.

Interns also participated in the weekly Hack The Box Power Hour with Floyd and Chandler, where they sharpened their network traffic analysis skills in preparation for

next week's Capture the Flag. The interns concluded their week with a study session to prepare for the DVMS certification exam.

Vendor of the Week: Horizon3.ai

This week, we are proud to feature Horizon3.ai, an AI-powered system that helps organizations find and fix security weaknesses before attackers can, without requiring constant human intervention. Solutions3 LLC has officially adopted Horizon3.ai's NodeZero platform

to strengthen internal security efforts. During our session, hosted by Mark Marino, we explored how NodeZero safely runs autonomous penetration tests without disrupting live systems. Some of the key features include pentesting, tripwires for early detection, and

seamless integration with Splunk, CrowdStrike, and ServiceNow. With statistics showing over 2,000 active exploits in 2024 alone, it's clear why continuous, AI-driven pentesting systems like Horizon3.ai are a smart move.

The Future of Ethereum

In Cannes, France, the Ethereum Community Conference was recently held. While the film industry is known for its own iconic festival in this city, Ethereum, a popular cryptocurrency, was the main focus of this event. Cryptocurrency founders, developers, and titans were present at EthCC. According to CoinGecko's State of Stablecoins report, one of the main goals of the event was to provide "the groundwork to make Ethereum home for the next

billion users."

Ethereum is decentralized. Decentralized systems remove the need for a central authority, allowing people to interact, share, and transact directly with each other. This makes systems more open, transparent, and resistant to censorship or control.

In the case of Ethereum and Web3, they allow individuals to have more control over their digital lives. This includes owning personal data, sending mon-

ey without relying on a bank, and using applications that are not controlled by a single company. Institutions such as BlackRock and Coinbase are quickly adopting Ethereum, building platforms around it as it continues to cross over into traditional finance.

Google Hit with Antitrust Complaint In EU Over AI Summaries

"The unlicensed use of creative works for training generative AI is a major, unjust threat to the livelihoods of the people behind those works, and must not be permitted"

This week, independent publishers in Europe filed an antitrust complaint against Google's AI overviews, those short AI-generated summaries that show up at the top of search results. They claim Google is using their content to generate summaries without giving them a way to opt out. Publishers say this is costing them traffic, readers, and ad revenue, while Google argues

that AI Overviews help users ask better questions and discover more content overall.

Although these summaries may be convenient, they aren't always accurate. When they're wrong, they can mislead users and take away from reliable sources. This situation raises an important debate: AI can make finding answers quicker, but what happens when it sidelines the people who create the

original content? This complaint shows that as AI keeps growing, there needs to be more conversations about fairness, transparency, and how to protect independent journalism in this evolving digital world.

Inside FLEX-SCALE: The EU's Vision For A Greener, Faster 6G Internet

The FLEX-SCALE project, funded by the EU, is advancing ultra-efficient optical networking to support the massive demands of 6G. With goals like 10 Tb/s per interface and 100x better energy efficiency, the team is building scalable, flexible photonic systems that cut reliance on

energy-hungry electronics. This tech could power future internet backbones with petabit-scale capacity, while staying green. As an intern in cyber, it's interesting to see how deep infrastructure like this quietly shapes everything we secure, from cloud platforms to IoT. Keep an eye on

this one, it's the kind of backend innovation that could change everything

Professional Development Series

For this week's Professional Development Series, Solutions³ LLC President Mike Battistella guided interns in understanding Strategic Thinking & Planning. He helped interns differentiate between strategic and tactical thinking, demonstrated how both methodologies are applied in real-world business scenarios, and showed two different frameworks that will help interns be more methodical about their career aspirations.

While tactical thinkers are more reactive to current situations, they don't plan for them beforehand like strategic thinkers; who are able to anticipate and position themselves for long-term success. President Battistella expressed that interns should absorb the advantages of both approaches. He also showed how both should be applied – by presenting real business plans that became the blueprints for Solutions³. The plans showed a breakdown of year-long projects/

goals; from the big picture down to day-to-day operational requirements.

Towards the end, interns were shown two frameworks that could help them focus their career goals: the SWOT Analysis and SMART Goals frameworks. SWOT Analysis is used to assess an internal/external factor's strength, weaknesses, opportunities, and threats. SMART Goals are used to help create specific goals that are measurable and

achievable. With all this shared knowledge, interns are now better equipped to become effective strategic thinkers and planners.

Falconi's Progress: Interns Creativity Sparking Potential New Business Venture

Nearing the halfway point of the internship, the Solutions³ interns have much to show for their time spent. The interns were initially led by the cyber essentials pathway and first tasked with creating their charter document for a fictitious organization, named Falconi. Further into the pathway came: a training product, onboarding checklist document, training quiz, inventory spread-

sheet, a network diagram, a role-based access policy, a data classification policy, and a backup plan. To kick off week one of the incident response pathway interns created a simple incident response plan for Falconi, as well as completed various incident response training modules across the Infosec and Hack the Box platforms. This week the interns are delivering an incident

report file, additional Hack the Box training, and a recap of our incident response team tabletop exercise. The Solutions³ interns have been plenty busy with Falconi and additional activities like the professional development series and vendor of the week!

"This week the interns are delivering an incident report file, additional Hack the Box training, and a recap of our incident response team tabletop exercise"

Did You Know?

This week, Solutions³ LLC has launched their revamped website, showcasing it's award winning, full lifecycle cybersecurity and IT offerings, centered on people, process, and technology. Solutions³ LLC is proud to have a partnership with the DVMS Institute, where they deliver

consulting assessments, training, and award-winning services to clients. Solutions³ LLC empowers clients across commercial, federal, and academic sectors. The new site also highlights recent contract wins-including DHS/CISA, FBI, and Navy. Additional higher education

contracts bridge the gap between IT consulting services and business by providing world-class service across all industries. Discover how Solutions³ is bridging cyber and mission value with skill, culture, and innovation in the ever-evolving cyber landscape.

SOLUTIONS³

"A great idea without an actionable or measurable plan is just wishful thinking"

At Solutions³ LLC, we believe that empowering people is the key to sustainable success in cybersecurity, IT, and business service management as a whole. Our commitment to resource development is evident through mentorships, advanced training, and workforce development programs, including impactful internships and apprenticeships.

For more information on our internships, workforce development, or training, contact Mike Battistella at mike@solutions3llc.com or Shannon Conley at shannon.conley@solutions3llc.com.

Special Thanks to Our Sponsors

We are grateful for the generous support and partnership of the following organizations, whose contributions help make the Summer Cybersecurity Internship Program possible. Their support enables us to provide hands-on learning experiences, real-world simulations, and invaluable mentorship opportunities for our interns.

Editor's Corner

Thank you for reading Issue 6 of Cyberside Chats: Summer Edition!

This week, interns continued with the Incident Response pathway, concentrating on identifying suspicious behaviors and mastering the formal incident reporting process. Additionally, interns utilized Hack The Box training modules to learn essential network analysis tools such as Wireshark and Elastic, applying these tools to create detailed Incident Reports based on simulated packet captures.

Our Professional Development session was led by Mike Battistella, President of Solutions³, who guided us through Strategic

Thinking and Planning. Interns learned to distinguish between tactical and strategic thinking, using frameworks like SWOT Analysis and SMART Goals to structure their professional development plans effectively.

Vendor of the Week featured Horizon3.ai, presented by Mark Marino. Interns explored how Horizon3.ai's NodeZero platform proactively identifies security vulnerabilities through autonomous penetration tests.

Special thanks to all the interns for their dedication: Aaron, Amaan, Bryan, Dominick, Jaylen, Jesus, Johnathen, and Julia. Additionally, we extend our heartfelt gratitude to our

exceptional leadership team at Solutions³, Mike Battistella, Shannon Conley, Kristen Nova, and Mark Marino, for their unwavering support, insightful mentorship, and dedication to guiding us through each step of this incredible learning journey.
